

SCREED SUPPLY / INSUSCREED SYSTEM™

Number One Ballsbridge, Dublin

Ballsbridge, Dublin 4 · DCOR Construction Services

Number One Ballsbridge is a mixed development in the heart of Dublin, designed as a commercial, residential and leisure scheme. Speed and performance were the priorities for the client on the 200m² commercial unit.

Access was the constraint: large vehicles could not get close and there was nowhere on site to store materials. National Screed supplied the insulated screed build-up direct to site, with Premier Floor Screeds installing both the insulation layer and the top screed as one package.

ON THE PROJECT

"Space on site was scarce and we couldn't get large vehicles close or store any materials on site... Our build programme was also improved through the speed of the install. The screeder was able to lay the top screed after a couple of days."

Denis O'Riordan
DCOR Construction Services

PROJECT DETAILS

Project size	200m ² commercial unit
Client	Beauty One
Architect	LUCA Architecture
Main contractor	DCOR Construction Services
Screed supplier	National Screed
Installer	Premier Floor Screeds
System	Insuscreed System™ – 110 grade

NO SITE STORAGE

ACCESS RESTRICTIONS

FAST INSTALL

QUICK DRYING TIMES

A complete insulation-and-screed solution for modern Irish builds.

The Insuscreed System™ combines the insulation layer and the finish screed in a single supplied package, batched to a tested mix design and delivered direct to site from our own fleet. Faster placement, tighter tolerances and a thermally efficient finish ready for underfloor heating.

Optimised flow

Free-flowing mix designs place rapidly and self-level to a flat, consistent footprint, reducing labour and time on site.

Thermal efficiency

Excellent thermal conductivity in underfloor heating build-ups, supporting the performance targets on today's residential and commercial projects.

Consistent, tested batches

Every load is batched to the same specification, so unit after unit performs the same way and programmes stay predictable.

Delivered direct to site

100% in-house delivery fleet from our Rathcoole hub. No bulk material storage, no waste to remove, 24-hour quote turnaround.

OUR SCREED RANGE

MIN DEPTH 65MM

PremFlow

Advanced cement-based liquid screed engineered for fast placement and a flawless finish. Ideal for UFH applications.

MIN DEPTH 50MM

PremPlus

Premium cement-based liquid screed for tighter depth tolerances on modern residential builds and renovations.

MIN DEPTH 75MM

FlowForm SCC

Self-compacting concrete that flows into place with no vibration required. Built for complex pours.
